1. Executive Summary

Dimension	Score	Rating
Professional Competency	5.0/10	Fair
Communication Skills	4.0/10	Fair
Overall Score	4.5/10	Fair

Key Strengths:

- + Experience with AI projects and utilizing machine learning techniques.
- + Exposure to practical programming environments through research assistant roles.
- + Engaged and willing to provide detailed examples from past experience.
- + Shows some confidence through non-verbal cues like eye contact.

Areas for Improvement:

- Lack of structured expression in complex problem-solving scenarios and significant gaps in job knowledge.
- Lacks clarity and logical structure when explaining projects and solutions.

2. Interview Information

Company Name	Meta
Position Title	Software Engineer
Candidate	10
Total Questions	4
Interview Status	Completed

Job Description:

Minimum Qualifications:

Bachelor's degree in Computer Science, Computer Engineering, relevant technical field, or equivalent practical experience.

2+ years of programming experience in one or more of the following: C/C++, Java, Python, Go, or Rust.

Experience building and shipping production software.

Preferred Qualifications:

Experience with distributed systems, large-scale systems design, or infrastructure.

Familiarity with React, React Native, or mobile development.

Experience with machine learning frameworks (PyTorch, TensorFlow).

Contributions to open source projects.

Responsibilities:

Develop and maintain software solutions that serve billions of users worldwide.

Collaborate with cross-functional teams including product managers, designers, and data scientists.

Participate in code reviews and contribute to engineering best practices.

Debug production issues and implement solutions with minimal guidance.

Mentor junior engineers and contribute to team growth.

Skills:

Algorithms and data structures

System design

Code quality and testing

Cross-functional collaboration

3. Professional Competency

Score: 5.0/10 - Fair

The candidate demonstrates a basic understanding of job-related concepts with some experience in AI projects, but lacks the depth and clarity required for the Software Engineer role at Meta. Their problem-solving skills show potential, but they need significant improvement in demonstrating applied mental skills and creativity.

Strengths:

- + Experience with AI projects and utilizing machine learning techniques.
- + Exposure to practical programming environments through research assistant roles.

Areas for Improvement:

- Lack of structured expression in complex problem-solving scenarios and significant gaps in job knowledge.

4. Communication Skills

Score: 4.0/10 - Fair

The candidate has fundamental engagement skills, such as eye contact, but struggles with clarity and logical structuring of answers, which affects their communication and persuasiveness. Their ability to convey complex information clearly is limited, hindering effective interview performance.

Strengths:

- + Engaged and willing to provide detailed examples from past experience.
- + Shows some confidence through non-verbal cues like eye contact.

Areas for Improvement:

- Lacks clarity and logical structure when explaining projects and solutions.

6. Question-by-Question Analysis

Question 1: Behavioral

Can you describe a time when you mentored a junior engineer? What approach did you take?

Score: 2.7/10

Your Response:

[Main Question] Thank you for sharing your background, it sounds like you've gained some valuable experience, especially with your AI projects at Hong Kong Polytechnic University. Now, can you describe a time when you mentored a junior engineer? What approach did you take? [Answer] Yes, for sure. So in one recent project called the Interview Simulation Platform, I'm working with to student helpers. Actually, I always use WeChat app to interact with them the way we are, discuss their progress, the difficulties they may face every day in the WeChat. After this I also will introduce some package of some tools to help them do the development such as cloud code or the ChatGPT. They are very strong AI tools to help them do the coding. Collaborist junior developers. I always will give them some ...

Non-Verbal Performance:

Dimension	Score	Evaluation
Eye Contact	8/100	The candidate maintains consistent eye contact with the camera for the majority of the video, showing attentiveness and engagement. There are occasional brief glances downward or to the side, likely during thought processing, but he quickly returns to direct gaze. These natural breaks do not detract from overall visual engagement and appear authentic rather than distracted.
Facial Expression	8/100	The candidate displays a generally pleasant and professional demeanor, with natural mouth movements matching his speech rhythm. His expressions remain mostly neutral-to-positive, conveying sincerity and focus without appearing overly animated or emotionally flat. Minor moments of slight tension around the eyes or brow suggest mild nervousness but do not undermine professionalism.
Body Posture	8/100	He sits upright with shoulders relaxed but not slouched, projecting confidence and composure. His head remains steady and centered in the frame throughout, indicating good physical control and presence. There is no visible fidgeting or shifting that would suggest discomfort, contributing to a polished interview appearance.
Gesture	6/100	Gestures are minimal and largely restrained; only one notable movement occurs at 0:14–0:17 when he adjusts his earbud with his right hand. While this action is functional and not distracting, the lack of expressive hand movements limits emphasis and dynamism in communication. Overall, his stillness is appropriate for a formal setting but misses opportunities to reinforce key points.

Pronunciation Assessment:

Metric	Score

Accuracy	3.2/100
Prosody	7.2/100
Fluency	7.0/100

Question 2: Skill QA

What are some key algorithms you have used in your programming experience, and how did they impact your projects?

Score: 3.0/10

Your Response:

[Main Question] It sounds like you have a great approach to mentoring, using tools and communication effectively to support your team. Now, drawing from your diverse programming experiences, what are some key algorithms you have used in your projects, and how did they impact your work? [Answer] Oh, yes. So, just as I mentioned. In my recent project. I'm working on air area. So mostly I will use some fine tuning strategies to training to train to large model. So I will use such as supervised fine tuning or reinforcement learning. That's larger remote owners on specific knowledge. Okay, so after this I also will use some data structures. Structures such as tree or stator. How to say? To start a dialog history based on generated by the legend remote. --- [Follow-up 1 Question] Got it, and ...

Non-Verbal Performance:

Dimension	Score	Evaluation
Eye Contact	8/100	The candidate maintains generally consistent eye contact with the camera, looking directly forward for most of the clip. There are occasional brief glances downward or to the side, likely during thought processing, but he reliably returns to the camera quickly. This suggests attentiveness and engagement without appearing overly rigid or unnatural.
Facial Expression	7/100	The candidate displays a mostly neutral to slightly serious expression, appropriate for a professional setting. His mouth moves naturally while speaking, and there are subtle eyebrow shifts indicating concentration, but he lacks noticeable smiling or expressive variation. The expression is functional and not off-putting, though it could benefit from more warmth or emotional nuance.
Body Posture	8/100	He sits upright with shoulders relaxed but not slouched, conveying professionalism and composure. His head remains steady and aligned with his torso throughout, suggesting confidence and focus. Minor movements (e.g., slight forward lean) appear intentional and natural rather than restless or tense.
Gesture	5/100	Gestures are minimal and largely restricted to one brief ear-adjustment at 0:25. His hands remain out of frame and still otherwise, which avoids distraction but also misses an opportunity to reinforce verbal points. While not negative, the lack of purposeful movement makes his delivery feel somewhat static and less dynamic.

Pronunciation Assessment:

Metric	Score
Accuracy	1.8/100
Prosody	7.3/100
Fluency	7.8/100

Question 3: Scenario

Imagine you are debugging a production issue that affects millions of users. What steps would you take to identify and resolve the problem?

Score: 2.0/10

Your Response:

[Main Question] That's a really interesting approach to structuring dialog history, and it sounds like it greatly enhanced the conversation strategy for your robots. Now, building on your experience with problem-solving, imagine you are debugging a production issue that affects millions of users. What steps would you take to identify and resolve the problem? [Answer] Okay. So I think firstly we will have an emergency group meeting that we will discuss which part of the product has bug. Then we will have we may have a waymate established sub team called debug team to find the fan this bug. On the revised code to solve this problem. also we will have one or two people one or two person to review their debug also we will test by testify will give a test

Prosody	6.0/100
Fluency	6.5/100

Question 4: Self Introduction

Please introduce yourself and tell us about your background.

Score: 2.0/10

Your Response:

[Main Question] Hello and welcome! I'm so glad you could join us today. This is an interview for the position you applied for, and it will take about eight minutes. I'm looking forward to learning more about you. To start us off, could you please introduce yourself and tell us about your background? [Answer] Yes, for sure. So actually my name is and I'm a graduated from the South Channel University of Technology. In the university. My major is about the South Korea engineering. So that's why I'm here to join you in this interview. And also in recent two years, I am working as a research assistant in Hong Kong Polytechnic University. In the sim. Research assistant.

I'm working on AI project. So in my recent projects I always trying to fine tune electric model or build a platform based on t...
